The Yao native desktop app provides a more streamlined and accessible experience for your computer compared to using a web browser. Once installed, the application is pinned directly to your taskbar and desktop, which ensures you can access your practice management tools instantly.

### Downloading via Microsoft Edge

If you use Microsoft Edge to access Yao, follow these steps to install the application:

1. Navigate to the Yao login page.
2. Locate the **App available** icon, which is the L-shaped symbol positioned in the address bar between the **Security (key)** and **Favourites (star)** icons.

3. Click the **App available** icon to instigate the download of the Yao app.
4. Wait for the process to complete. The Yao app will now be pinned to your taskbar and your desktop.

### Downloading via Google Chrome

For users who prefer Google Chrome, the installation process is highly visible within the browser interface:

1. Open the Yao login page in Google Chrome.
2. Locate the **Install** button, which is situated on the far right-hand side of the address bar.

3. Click the **Install** button to instigate the installation.

4. Confirm the installation if prompted by the browser. The application will be applied to your taskbar and desktop for quick access.
